

ASCEND® 12"
BOARD & BATTEN

HIGH-END AESTHETICS WITH INSTALLATION EASE.

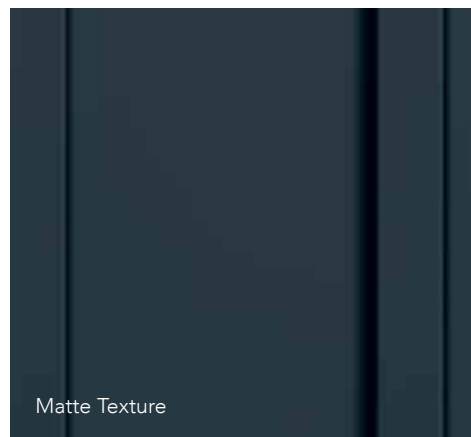

Featuring the realistic look of wood and high-performance technology of ASCEND Composite Cladding planks, ASCEND 12" Board & Batten beautifully replicates the artisan details of this historical handcrafted siding. The ample 10" board with 2" batten adds visual depth and striking architectural appeal as a vertical accent or whole-house exterior.

TRADE-FRIENDLY!

-  Single-step installation – integral batten strip saves time vs. fiber cement battens that must be individually fastened, filled in and touched up
-  Lightweight and easier to handle than fiber cement and engineered wood; no large, heavy unwieldy panels
-  Lower total installed cost – may save 10% or more with reduced time and fewer laborers required
-  No special skills, special tools or respirators required; no sealing, joint flashing, caulking or touching up
-  Forgiving hang – conceals uneven surfaces; self-aligning interlock ensures a consistent appearance
-  (GP)² Technology[®] provides greater structural integrity – resists high winds, moisture and impact damage from dents and dings

Cedar Mill Grain Texture

Matte Texture

QUICK SPECS:

12" profile width with a 3/4" panel projection; available in two textures

21 on-trend, fade-resistant colors

Compatible with standard and architectural trim options
